The Tulare County Historical Society is a voluntary, non-profit organization devoted to the study and spread of information about local history. All who are interested in this subject are orgod to become members. Please soud the secretary a list of these in your immunity to whom an invitation should be sent. Does are one dollar and fifty cents for the period suding December 31, 1961. Therenfler one dollar per enlender year.

BIG TREES ...

Probably the mly midest description ever applied by Califortune Stayte the sight of these trees has so awed all beholders that permal powers of etaggerstion have been dulled

California's prife and wish to show Hig Trees to strangers was awakened early and as far back so 1854 the bark was stripped from a tree to the Coloreran Grove to be reassembled on framework. The Centennial Exhititton at Philladelphia in 1876, The World's Columbian Experition at Chicago in 1892 and other bra faire have had their exhibits of Hig Trees. At first they were greated with skepticism but gradunily the reports of eye-witnesses and the general distribution of photographs overcame doubts and Califorta's Big Tress were accepted an facta-

WORLD'S FAIR TREE

An Interview with Jense Patte By HAROLD C. uchivity

The most appliffices. Big Tree existili was that shows at the World's Cojumbia Expedition at Chicago in 1882 (orginally schednied for 1992), The tree was a part of the U.S. government anh.bit. A soutract was made by Burr Milchell, of Mirmonaco in cut a big Sequois and prepare Le Grand contracted to build a road and haul the material to the railroad. The tree selected was the "General Noble" and was hunted about three miles much of the parth west corner of Genmai Grant Park.

Little description of the cutting of the tree is needed because it in shown so vividity by the pic-Bulletin. These pictures laken by C. C. Curtis are as sharp in detall as once taken today and barn bove presunted by Mr. Patter 66 the Totare County Russian.

The tree was gut off about fifty feet above the ground and James Patter will arres forget the experionse of the moments when the tree fell. It did am go as pleaned. The trunk slapped back onto the stump and broke the scaffeld. Patter and the three others doing the cutting jumped onto the stomp but couldn't stand ures.

in the solddle for young minutes because of the velocation.

all time was lightened out and to steen from "shares" our with the bark and about six mehow of would. Then a section about two marning stimp and then another set of fourteen foot staves was prepared. These parts were all marked and crated and basied out to Manager for shipment to Chicago, The stump fifty feet above the ground, was electore feet etx tuckes larger at the top of the frienty foot efficup which was left when the job was done. This selle is new called the "Chicago" ed uppp-

Efforts have been made to find my what happened to the exhibit after the fair should as if was underwiced that it had been moved, After hearing that it went to Washington, Separce Knowland true asked in secure such information or be sould. The following was furnished by the Legislattic Sofrence Sarries of the Library of Courses under date of March 14, 1850.

"Chinage World's Pair Section of fright Sequila Tree"

The section of Class Sequeta. originally cut for suitible at the (Continued on Page 2)

CENTENNIAL TREES

well known when the United States celebrated a century of Independence with its first big fair at Philadelphia in 1876. What would normit the fair visitor to Visualize these trees botter than to exhibit a section of the truth of a tree! A solid section couldn't be transported but the next best thing was done Mrs. McGee reports, "In 1875, Martin Vivian ent a big Sequofa near the General Crunt with axes, a statuen foot sention was cut out and split into pie simped pieces taking nurs to preserve the back. They then uplit the heart out of each place leaving a rim of bark and sape ond. These puter pieces were hauled out he Happy Gap thear present Sequo a Laket and Traver to Cross Creek and shipped to Unfladelphia."

Mrs. McGoo's uncle, Israel Cam. fin, find a squatter's thubyr claim in this area and he, with Mrs. McGes s father, Tom Gamlin: Poler Kanawker and probably others. belped out the tree. Vivium was not well-to-do and probably had some financial bucking but there and information about outside

Jesso Puttee says that Sam and Bill Harp, Huse Campbell and John Moore build the exhibit to the railroad. He recalls that when he that went to the mountains that it was a fail to fashion capes from sticks split from the centennial log.

Park records confirm the genera) information above but menthen no names. Since Virtan out. this tree on government land without permission tradition says. that he was septenced to a year in fedoral prison. Wallace Elllott in "History of Thinre County" (18-\$31 says he was finged lifty dollars but should have been jailed for life for his vandatism.

The most interesting thing about this exhibit was the lack of enthusiasia that it encountered at the fair. People were skeptreal and couldn't believe that a tree could grow so big. They pointed to the places the log was spill as proof that many small trees had been fitted together. A typical California hoay,

There is also a "Centennial" stump at Mountain Rome, This tron was cut by John McKiearnan, J. R. Hubbs, and Ed Manley as a commercial venture, admisston being charged when it exhiblief. This tree was out off high above the ground, hollowed out,

takun too vin Happy Camp. Plice Springs Raubnerte and Mountain View, the the K nears Mill road) It was shipped from Tnlare he rall to San Francisco · here it was exhibited at Woodward Gardens and thence routed sort to the Centermial One by one the partners withdrew from the outerprise, First Manley, then McKlearnan and before the tree left San Franc'sen Hubbs sold out for two thousand dollars, three thousand deliats less thun the ener of preparation A financial Hasco and tradition says the new owners had no better luck.

The above information is summartsed from a paper prepared in 1923 by Mrs. Jay Brown, She had difficulty security informsthen and had to rely on much beursay weldence Her information was that the tree was out in 1875. There are a number of Brinted references to this exploit that agree to most aspects but either do not mention the date of cutting or place it in 1878, which would, of course, he too late for the Centennial.

Wallace Elliott in his "History of Tulore County" has consider while detail about the project har. gives no date. The very next paragraph tells of the Vivian tree which was referred to earlier. If the McKisaruan-Hubbs-Manley true also was sent to the centermint arrely Rhitett would have known and mentioned the fact.

"Bus wess Directory and Historics) and Descriptive Handbook of Tulare County, Cal fornia, 1888" published by Pilisbury and Elisorth at Tutare, gives a similar account and states that the tree war out in 1978. This same story e repeated in "Fen Pictures", a history of Fresno. Talare and Kern Counties published in 1891. It is difficult to locate exidence to overcome these these almost contamporary records If the tree had been sent to the Centennial Exhibit on one would expect these distories, published only a few years inter, to moution the fact The tradition that this was a Centennial" tree is very strong and goos back at least to the 1800 h.

At the request of the society the Pres L Wary of Philadelphia searched the material in its fires and has sent the fullowing queintions:

"Agricultural Building -In this building there will also be a display of all the products of the Porest both to primary and secthe rins sawed into scettons and onders form; and I is proposed

World's Fair Tree

(Continued from Page 1)

World's Columbian Exposition at Chicago in 1803, and later set up on the grounds of the Department of Agriculture in Washington D C., was dismuntled and moved to the Artington Experiment Form on the Virginia side of the Potomae lityer during the winter of 1931-32, Il was never re-tssemhiled, but rested there in storage for several years. No record of its final disposat is available, but it seems to bave been destroyed. No one was found who could show whather this was before or after January 30, 1942, when the Army took over the Ari ngton Experiment Farm. Prior to this date, all the agricultural work with the records of research had been moved to the Agricultural Research Center at Beltsville, Maryland.

"The record is clear that the section was moved to the Arthuston Experiment Farm, but thereafter nothing concerning disposal of the section could be rough Moreover, no piece of the section was placed with the wood exhibit in the Smithsonian Institution.

"The following statement is copied from page 32 of the Official Record, United States Department of Agriculture, for January 30.

that the bark of one or more of the giant trees of California be taken off the trunk in escipents and sections, to be placed on acrival on a skeleton frame of the same dimensions as the original. Agricultural Hall having an elevation of 75 feet, will give room for an exhibit of one of these INDUSTRIAL PROPERTY

"Hand-book to the Centennial Grounds and Fairmount Park Where to so and what to see, Philadelphin 1876, page 4.

"The big tress of California, for which the country is famed, were here represented by a piece of barz about sighteen faches thick taken from one of these monster zed-woods. Photographs of them wore shown, which gave a very good lides of their rigantle proportuins."

"The Contennial Exposition . . Philadelphia, Hubbard Bres. 18-76. passa 216-362

"Alon, the hig tree of California in a side show, and one must pay "Freents admittance. If he aces it at alt! It stands in a line with other mountroelties big cattle. ets. Little did we imagine that onything so veherable as a hig-California tree could be guilty of so disceputable a prank" The Republicum Epringfield: (Mass). July 24, 1876, (ellippings)

193 E:

Big Redwood Put In Storage

"The Sil-foot high section v. the trunk of one of the glant California Sequola trees which has stood on a concrete base in The Mall in Washington, in front of the Department of Agriculture main building for the past 38 years has been taken down and stored at Arlington Experiment Form, just across the Potomac rum Washington, to keep it out of the weather until another suitable tocation is found for it. This huge hotlow cylinder of timber. which may possibly have been a busky sapling by King Solomon's day, 10 centuries B. C., was movof became it was in the way in the Government building program.

"The section was cut for display in the Government exhibit at the World's Columbian Exposi-Con in Chicago in 1892 The tree grow on the boundary line between Fresno and Tulure (Sounties. Calif. From records which Dr. W. A. Taylor, older of the Bureau of Plant Industry, was able to find. the tree stood some 200 feet high n the forest, the section was hollowed out in Chisfornia, and the great hollow pieces of wood was out into 50 pieces for shipment to Chiego, Each piece being sunivalent to a ter 4 to a feet through and 14 feet long. The aretion was out 30 feet above the scound level where it grew, and it is 26 feet in diameter and 85 feet in riveninference. (Note: Pattee recollection is in feet which checks with stump) At the exposition the section was set up in the Government Exhibit, a spiral stairway was run from the hottom to the top on the inter or. and many vinitors to the fair viewed the exhibit from the vantage policy time affinished.

"After the exposition the seetion was shipped to Washington. and in 1894 it was placed in The Mall where it has been an object of interest to the thousands of visitors to the National Capital who come its way."

it is koped that the exhibit has nut been destroyed Probably the hark was failthg from the trunk after 2's years in the open in Washington The picture seems to indicate wires around the tree to keep loose bark in place. But this could be reptaced at relatively small expense and some museems could have a marvelous "B.z. Tree exhibit, Incidently the picture of the erec in Washington was found in some old files of the Pulare County Board of Trade. sround in the basement of the Visalia Mattherpal Auditorium.

Hud. Barton Pioneer

My father, Hudson D Barton, was one of Tulare County's hisforfans but he sent his diary, letleys, newspapers articles, etc., to the State Historical Library in Sacramento many years ago. The reason he ald was he decided Tolare County's Historical Society would have no place to keep twsords in his time. I have only a few articles that he wrote after that and happenings temembered from the facts told by my pionear family, the Bartons.

My father came to Tulare Counly in the fall of 1865. Most of his summers after that were spout halping build and run saw mills. The Hyde Mill, now Whitaker Parest; The Wagy Mill at Meadow Flat. It was here at Mendow Flat that Bud Barton made the First Sequola into tumber, but I will fell this story in his own words published in the Freeno Bee-November 28, 1926.

"In 1869. I, myself saw the first Sequola Gigantes ever made into number in the big tree belt.

"However, this tree was not felled by the woodman's axe. On News Year's night, 1868, this tree slipped its moorings in what le now known as Whitaker Forest and floated down Eshoni Creek lodging a mile below Meadow Flat For 2 or 8 weeks previous to New Year's day, it had been raining and the whole side of the mountain north of Echom Creek had slid in an avalanche into the creek damming up the waters. On New Years night the dam broke and the whole mass came down in a mighty rush. The trees and rooks may still be seen strewn all alone the canyon of Exhom Creek, below Redwood Mountain.

This tree was only six feet in diameter. If it had been much larger we could not have handled it with the milling equipment then used. At that time I was sawyer in the old Turbine Mill built by Jasper (Burley) Harrell, With a double circular saw we out the tree into three loss lengthwise. Abe Murray, Sr. spoks for the lumber before the tree was hauled from the creek. Murray had the lumber hauled to Visalia and with it built his house on the Mulyay ranch in 1870."

In 1874 the Hust Bucton family. my father, mother and their three little boys, moved to Cedar Spring and built a mill and a home. The mill had to be built first to make lumber for other buildings, etc. That meant camping out. The first night was spent on the bank of Pedar Creek, An animal walked over the foot of their bed in the

SAW MILLS ON TULE RIVER

Porterville High School under the and being hanted up by mules. leadership of M ss Inn Stiner comprind a "History of Porterville" It is a very creditable piece of wark that should be duplicated in other towns. One chapter deals with the lumbering industry.

This group found that the fast sawmill on the Tule, at least in the redwood hell, was in the Doforwood area on the North Tule river. This first mill started not later than 1865, was owned by J. N. Hubbs and operated by water power, N. P. Dillon purchased the mill and installed steam power lamber was brought out on a tramway using wooden rails.

night. Father maisted that it was a bog but he got up first the next morning and covered the bear tracks before mother could see them. They moved camp that day Just a little farther away from Old Burin's beaten path.

This mill was run by a water wheel and an upright saw. The lumber was mostly pine and some codur. Barton sold all the lumber at the mill. This brought a numher of people in Some families came to camp awhite and get away stamp heat and mosquites of the valley. One woman, who bad spent most of her life in San Francisco. only stayed over night for the place was altogether too wild and primitive for her. She didn't see what kept us children from going completely wild. Father solumnly swore that he chased us down with the dogs every Sunday morning to put clean clother on us, then turned us loose to run whit for another week Then too, our neighbors, the nearest six miles away, would come for a little lumber and stay over night for a wit. Among these were Tom Com-Hu, wife and baby daughter Lizsie (Mrs. Metles). So you see frieudship ton passes down thru the years. The Hud Barton's were there eight years in all, three of us Parton journaters were born there, then futher sold out to his brother Enes Barton, and his brother in law, Bob Hardin, wha ran the little mill four years more All the available (muber was cut at the oud of twelve years and the mill was left standing until the winter of 1893 when Soniag and Evans burned all the buildings after taking a few boards to house in the r Fort Deflance, less than s mile up the canyon. Thus passed into history perhaps the smallest, and for its size, the most profitable mill ever built in these monuments.

Oriena Barton Wrought

A few years ago a group in the the ears coning down by grantly The was later replaced by flume. Both terminated just north of the old control station, where the Balch Park road starts up the mountain. About 1900 the Enterprose Mili was moved from Monntain Home to Dillopwood and opposited on and aff until 1614. Four years ago a new road was built to this settion and logs are now being hauled to Springville mill.

> The second mill to come into the Tule river country was benight by ex-ream from Santa Clara county about 1879, by Charles F. Wilson. It was set up at Happy Camp on the headwatters or Bancherie Creek, J. Kincald wought it at auction in 1876 tor \$400 00 and a year later sold it to Band and Horton A. M. Coburn bought Rand's luterest and operated it for several years. It was moved several times. Finally to e point below Mountain Home. Cohurn built a flume down Bear Creek and had he "dump" 600 Horton's place, (Afterwards this was known at the Pete Planchen or Jake Garner place; For many years Coburn operated a finishing mill at Springville, near the Such Spring, Later he was County Clerk of Tulare County.

> L. B. Franter built the first will at Mountain Home Frazier, a promoter of some ability, built a road from Milo and Rancherse. up Bear Creek to the site of the mill. He moved a mill from the Fine flidge area above Tollhouse in Prema County to Mountain Home and operated it a short while in 1885, Churles Doty helped basil the mill and drove ball teams to skid logs to the mill. Frukor went broke and left the county The mill passed to Pease Newport and Jorrand From the back in 1889 Frazier at No. blockaded the road he had built, hoping to collect tolis, but some of those who had not been paid for their work ince down the barrigades and in the confusion the county acquired title to the road. It is still used as a tire protection road but is very steep The Frazier mill burned in 1888

> The Enterprise mill the larcest in this area, was erroted in 1897 about a mile above Mountain Stome, but operated only a short time because the company had only 50 acres of timber. The sawshus piles past above "Hercules", the tree with the room but put of its heart judicate the site of this mill.

Churies Elster murchased the

0.0

Coburn mill in 1898 and inter nurchased other mills and conmildsted them just north of the present buildings at Mountain Home. A Mr. Conles operated a mill at Brownie Meadow which is also in the immediate vicinity

These mills out pine, fir and redwood. Yery few hig trees were cut that exceeded sixteen feet in diameter. They were out ten or twaive feet above the ground, two men ordinarily would fall a big free in two or three days. An under out was made, it was sawed from the opposite side and wedged over. The redwood being brittle was often badly shattered in falling and the logs had to be divided into sections either by splitting or blasting in order to go thru the saws in the mills Most of these mills had two circular saws, one above the other and slightly behind. For a time the Dillonwood mill had a "aplitter", a long drag saw that not biz logs endwise.

Lumber from the Mountain Home m.lis, except Coburn's, was harded down to the valley he teams. The mountain tenmeter was a very skilled man and quided his animals by word of mouth us much as by his "jerk line" Lumber at the mill was about ten dullars per thousand Many of the old houses in the county are built of redwood from these mills and generally are still quite sound because termitée do not attack this lumber.

Many people used to spend their vacations around the mountain sawmills, Lumber to build a little rabin didn't sost much and the grain farmers, when the harvest was in, went to the hills for several weeks. Fred Wells, of Tu-lars, recalls that six or seven hundred people camped about Mountain Home and in 1882 three bables were born there J. J. Doyle started his Summer Home resort in 1890 and actually sold late for embin sites. This area is new Balch Park.

Mountain Home, which originally applied only to the resort operated by A. J. Daty near the Frider pull is the name now applied to a large area south of Mount Moses. It is a State Forest mostly purchased from Mckings interests who had acquired the land after the mills discussed in this paper had ceased operations.

There was one mill on the South Fork of Tule river about two miles below Rogery Camp south west of Camp Neison. It was probably started in the 79's and in 1884 was being operated by Porter Putnam. Coburn is supposed to have purchased this mill

BUZZARD'S ROOST TO OLD ADAM

(Thin paper was given by Mro. Lizzie in a picule at Big Stump on August 27, 1950.)

Early Sawmills In Northern Tulare County

Continued from Page 1)

ted other mills in the mountains and in Mexico, At Atwell's mill on the Mineral King coad he eat the tumber for the first fluwe of the Mr. Whitney Press Company. His daughter, Mrs. Efficientains, etill owns more Unberland near the park, and has been miner home. "Cometock Ledge," on the property.

Impine the time that Comstock was at Hig Stump, Moore and Smith commenced operations at Millwood and this betame the bingest operation in this part of the state. In 1869 a dam was constituted at Mesdow Flat and Sequent Lake was formed. The water was used at the mill and to preals a flame that extended sixty miles to Sanger. This company and its successors legged the Converse Basin and around the mountain to Hume. These mills were in Presso County.

Who Was Van Doorman?

My and Mes A. P. Hubbs, of Viralia, told the writer of a Mr. Van Doorman who in the aumner of 1802 had a big tree felled and settlems butled out and slipped, presumably to the World's Pair of Chicago. They recall him as being very reticent about his plans, and many times their enviously has made them a order about him. At the time of the interview authing was said about there being more to the peoposal exhibit than a large cross section of the runk about one foot thick.

In "Pen Pictures of the Garden of the World", published in 1992 there is suite a detailed dierr ption of the Neal Van Boorman exbible which is stated to have alrendy searhed San Francisco on its way to Chicago We quote a paragraph; "The entire piece of would consists of states sections an follows: The lower section in one frod in height by twenty feet to distincter, all by one solid out. weighing 15,725 pounds. This will be arranged as a floor, placed on othe elegantly surved and encrimins pedestals made of the more tree. The next is seven test in height by twenty feet in diamorer, which is hollowed our and will be placed on the fluor cut. The last and final cut is one foot high and stullar in every respect to the liner rat. The whole of (Continued on Page 5)

desert plain in the early 1880's It lay midway between the heryou Coust Range Mountains to the west and those lovely filerra Nevada Mountains to the suat. We lived out there, three miles south of the Rosst, amid a flock of kinfolks that had traveled from lows to Californ a, from Oregon to the Mexican border, and then they came to rest in that despire place, where even grasshoppers had in out the fence posts to survive. It was hot and dry down there out in 1885 and the families dectaed to come up to Old Adam, Grandpe and Uncle Arley Purnell each owned a timber claim that included this old stump. At this date Busnard Roost has blossomed into full bloom as Waukena.

Off Adam tooks exactly as he did in 1885 but he has a new title and a stately term of young lie-quotes about him. He's flurnt Monarch now, and there he stands in front of us, just as firmly set and as sturdy as he was it's years ago, and he looks exactly as he did then.

Well the several families of us got themselves loaded into un ueaurtment of validles with har. grab and bedding, and flocks of gleeful children squeezing into place the best they sould. Tenne of exciously colored mulas or furnes started out with as is low for the long but trip up to where we arm are A slog followed under the wagon; a water bucket and a black camp cooking kettle swans under the rear end of the wagon bed. Simple for the most part were just wacon traffe. If our wore suf some wagen made a parallel track and a new read got under way, We went through Tolore and on through Visalia, there we stoppod for one camp, at the old finer mill way out and of tires. The Santa Fo deput over near the ette. now On the way much of Vinalia So turned sust into a lune fenced on such a de with piled up loge. redword, mak rolar and other mountain debris. These had been parted down the Kawash River from the high mountains during the ruging floods of the 1550's, We went sogithe across the plains o cody is a Point new Red Banks. On the way we traveled among licide of him wallows, designacround one as best we could, with the wagen inrebing along to meet spotter bog kill. The Twin Butter. held out attention, murdy lonely tooking little hills way out on the valley floor In camp at even to tion the little turnelotes or

Coyotes joined in a wierdty wallest and there there miles south or to the tunes of these musicians the Roost, amid a flock of kin-

MEGE

We traveled up the Cottonwood past Hungry Hollow, and on to monntain reads. These went along eastly traveled inclines, then up over steep mountains, dodging rock ledges, past interesting scenes, up and ente daugerous looking spots, just wherever a horse would get a footing and a wagon could be drawn along without appetting. We passed the cun and savour rock, came within sight of the three owl cittle on Owl Mountain, Ever upward behind tired sweaty horses we finally reached Battlemake Divide. and down the Battlemnike grade. it was a torribly steep incline it looked dangerous and sounded polasmus. Near the foot of the Rattleenake Grade we crossed Contunwood Creek, Mers. during the winter of 1885, and during bintflood waters. Mr. Illies of Visulta was drowned. He carried the mail between Camp Badger and Vissiathe rode his horse into the fooming swiring stream. They both went under the horse awain out and Blim dropped from him on the bank, dend.

After more unbill we came to a motential settlement. The Contonwood School there, boosted forty or more pupils Bud Sarries and his brother put up the hullding. Had made the furniture from odds and ente of salvaged material. He taught the school, suring intendiancous books that had been brought across the plans in covered wagous. The Ottouwood was one of the very first public schools in Tulary County.

The Barton boys, Frank and Bert, raised watermelons, and had at stand as the tirm of the road serous from the house. How dettations those numbers were to a housgry fired dust covered travales as he pussed by and stopped to ear one.

A few more ups and a few more terms and we began to find really much roads. Eliza Rock was a term to be negotiated enrefully Horses had to pull out on a cirk rock to steer the suggest away from the bank. In time we same to the Sam and Dan Perry ratch, it was named France Plat, and was an inviting arcentish complina place. Som Perry was a columnary midestaker for the mearly mount

taineers who passed on to eternity in those days when a neighbor died surseone came in and laid him out put a coin on such eye to keep it shut, covered him with a sheet gud made funeral arrangements. All this Sam did free of charge. A comforting neighbor he was.

October, 1950.

Leaving Frame Plat we come to Buckskin Pitch, a touch hill that took out good team work and a good drives who often seed pet swear phrases to get a sport of power out of a team. On up we fated Devil's Slide How the name! Maybe too many gwear words, I dun't know. On this eithe an Italtan toumster was killed. He lost control of the wagon and attempted to hank it. It hanked all right. and open burling him forward beneath a wheel length wire. His full length was renshed. Up, on up we climbed to Budger Saddle and down to Camp Hadger. This was a levely comping place, meadows, a refreshing stream and people living a beautiful life. The Westhere limity row on setting place and Woodards had the Post Office and a store.

Prom here we climbed to Huga lines. Hope, then elected around south under Laguer Point Stidge to Log Ridge. Reve regimbers watored and resid before justing the long climb chiest. First same a pitch culled Hardscraftby. From here on campers witnessed some perfect freight team porturnance. The Deable II road for abred, It was steep and rootled. The steady sull thump of the ste-p, ste-p. ste-p. althogether, to the rythere of tingling bells on the names of the leaf former was most faccingting. The obele-chesk of the butt chatan sierteen, and his links, and various other metals that held with the steps and bells and squesking leather. The Iron tired wheels betteped and grated along under a heavy load, over rocks and else bille, in the wake of emothing persons that her been lost forever-the eventy emend footprope of a fourdenced team of horses and their karness churus. At agy carre on the rightly numed Double S Road, It was "yea-a Nig: get over menning, home the chair", or "How You, jump". to bring the wagen around a curve without banking the wheels or tramping the warre. Not all horses could be trained to be a stoowweful freight notional ner could all men attain to the high eatling of a good mountain driver; Workbillers were on the linkout for these big freight teams and as the first sign of meeting one, . tike the tinkling of both, serecting of brakes, or avairag of

From Files Of Porterville Enterprise

Tribune. Porterville, reprinted news items from the Porterville Enterprise, a newspaper printed sixty years before. This was when activities were at a peak at Mountain Home and some of the material sheds light on the subject matter of this Bulletin. The Enterprise wording and spelling has been retained.

Another McKiearnan Tree

June 8, 1889, John McKiernan. of Cramer Intends cutting a 26foot in diameter redwood tree for exhibition sometime this month. This tree is situated near A. J. Doty's Mountain Home summer resort.

August 3, 1889. John McKiernan felled the large tree at Mountain Home that he is to take to Europe, last Friday evening just at dusk. Many were disappointas only two persons saw it fall. Many campers had gone from Summer Home to watch the work for the past two weeks.

August 31, 1889. John Mc-Kicarnan, of Pleasant Valley, in-forms that he will send down h.s big tree samples to Porterville next week. It is divided into eight distinct pieces which will be banded together when they arrive in Los Angeles where they will be shipped for exhibition.

October 5, 1889. At last, the big tree, "California", which Mes-sers McKiearnan and Davidson have been cutting down in the Redwood forest above Frazier, is ready and will be under way to ready and with the distribution of the wild west will be welcomed as a curiosity, and shortly, those narrow-minded shortly, those narrow-minded sceptics who have never seen a genuine Giant of the Redwood groves will have to admit that the fabulous stories told of the world famous but little seen Sequoia gigantes are true.

"Cal.fornia" was cut from a tree growing in the Redwood grove home three quarters of a mill to the east of I razier's mill and is a portion of a forest giant which grew to a height of some 300 feet and measured some 76 feet in circumferance at the base. It has been cut into eight separate pieces each weighing some 1,200 to 1,500 pounds.

John McKiearnan and three assistants accompanied "California" to Porterville, where they arrived at about 2:00 P. M. Tuesday. Monday morning will witness the departure of the stump for V.salia where it will be placed on exhibition for the forthcoming fair, after which it is bound for Tulare, Fresno, Merced, San Francisco, Sacramento, San Diego and San Bernardino. Eventually, it will bid a long farewell to its native state and will start for New Orleans via Texas.

(Note: That is all we know out "California", Can anyone about "California". Can anyone complete the record? There is a picture of what is supposed to be the Porterville band standing on a section of redwood such as discribed above. Is it this exhibit?)

Frazier-Fraiser-Frasier Road

"Frazier" is used most frequent-

In 1948 and 1949 The Farm ly in referring to the old mill at reprinted Mountain Home. Frazier built a very steep road up the west side of Bear Creek to the mill site. After a short time he went broke and left the area. When he came back he attempted to recover the road in order to charge toll with results reported as follows:

July 13, 1889. The petition presented to the Board of Supervisors. Wednesday last, to declare the Frazier road a County road was acted on. It is now a public high-way and W. W. Brown, the road overseer of District No. 1 was thereby ordered and directed to open said road.

July 20, 1889. It appears that after the lawsuit in which Fraiser lost the other day, he took up-on himself the responsibility of closing up the road, extending a gate across it, backing up the same by shotgun law.

However on Saturday. Roadmaster Brown, in accordance with orders received from the Supervisors, went up and declared the thoroughfare a public road. selonging to the County, and openit up for public traffic, but Fraiser closed it up the following day, seeing which, Brown came down to Porterville and swore out a warrant of arrest for Fraiser on a charge of obstructing a pub-

Constable Rose later arrested Fraiser, who was brought before Judge Redd. Fraiser was granted a change of venue to Visal.a since he claimed that he could not re-ceive fair play in Porterville.

August 3, 1889. On Sunday the 21st, a mob of about 10 men armed with axes and rifles proceded from Mountain Home to Camp two on the Frasier road and proceeded to demolish the gate and fences leading to the Frasier m.Il. Mr. Frasier on the following Tuesday went to Visalia and swore out a warrant for the arrest of the three principals of the gang, Clyde Tyler, W. Sullivan and A. J. Doty, Jr.

Undersheriff White served the warrant on the parties mentioned above on Sunday last. They appeared but were dism.ssed on the grounds that as the road was a public highway, there was no cause for action.

August 10, 1889. L. B. Frasier (probably this is the correct spelling) called upon us Monday w.th a petition singed by over 150 of the most solid and prominent business men and land owners of our district. The petition is addressed to the Tulare County Board of Supervisors and sets forth that Frasier built the Frasier road, over which there has been so much wrangling lately.

The petition states that Frasier is the rightful owner of the road; that it is an act of injustice to take private property for pub-lic use w thout allowing the ownr compensation. It also prays for he resindal of the order of July 10, declaring the road to public highway and that Frasier be recompensed. Mr. Frasier laid the petition before the Board of Supervisors but we have not heard the results.

September 7, 1889. We hear that POSTS AND GRAPE STAKES no action has been taken by the Board of Supervisors regarding the report of the viewers of the Fras er road. The report favored the abandonment of the road.

Miscellanenos News

May 11, 1889. Work will commence at Coburn's Mill next Monday. Mr. Coburn has just returned from the city where he pur-chased some new machinery.

May 18, 1889, Supervisor Newport was in town on Saturday and Informed us that he has disposed to his Frazier Mill to Moore and Smith of Stockton.

August 24, 1889. Most of the teams have been taken off of the Coburn Mill road as there is little lumber left to haul at the dump on account of the lower water, there not being enough to carry lumber through the flume to the dump. ("Dump" was end of the flume.)

September 7, 1889. Emil Newan came down from Frazier's M.ll where he has been spending a couple of weeks. Jim Tyler and family returned from Frazier's Mill on Wednesday last, where they have been sojourning several weeks.

February 22, 1890. Al Howard and A. J. Doty made a trip to Frazier's Mill last Tuesday. At Harper's ranch they had to resort to snow shoes. Every house they passed on up the road they found broken in from the weight of the snow and several buildings at the mill broken down and damaged to the extent of \$700.

March 1, 1890. Avon Coburn has strated up his box factory at Soda Springs and is cutting fence posts.

March 8, 1890, A. J. Doty Is trying to have a post office es-tablished at his resort called "Mountain Home" near the old Frazier's Mill.

June 3, 1898. G. W. Thomson has opened up a saloon in the mountains, east of the old Fra-sier mill, H. F. Timeus went up Monday to take charge.

March 11, 1892. J. J. Doyle, in company with three other gentlemen from Tulare, was up in the redwoods above Coburn's Mill last Thursday and Friday looking at some of the big trees. Their pur-pose is to obtain one for the World's Fair. They have not made any selection as yet.

May 25, 1900, A traction engine belonging to J. W. Kyle, on its way to the Enterprise mill, fell over the grade opposite the Coburn dump. Monday, a distance of about 1,000 feet and literally smashed to pieces, leaving nothing worth picking up but the boiler.

According to reports the engine has always had bad luck. It was crought overland from Los Angeles by the Kaweah Colony peo-ple about 12 years ago and when crossing a stream in the mountains

Although this Bulletin deals principally with exhibits and lumber mills, it should be borne in mind that more big trees have been used for posts and stakes, than for lumber. The coast redwood, Sequoia Sempervirens, is superior to Sequola Gigantic for lumber. Many fallen trees, some of which have probably laid on the ground for decades, made sound

went thru the bridge, remaining in the river for about three weeks.

It was gotten out finally, but when being ferried across the Kaweah river, a cable broke and the flat boat and engine floated down stream, landing on an is-land. It was afterward released. but when crossing another stream. went through the bridge aga n. When it finally reached its destination, it was not used as a traction engine but was used as power to cut singles and shakes. We hope its junk rests in peace.

June 8, 1900. The heavier new steam-wagon "Spr ngville" went out Tuesday with 25,000 feet of lumber. It went up the Daunt hill without stopping. Arthur Young thinks the new wagon is a crackeriack

June 15, 1900. The mammoth new Trilby steam-wagon "Spring-ville" was steaming along in good shape near Globe with 38,000 feet of lumber when a wheel came off one of the wagons.

June 22, 1900. Redwood bark will be placed in the road where the steam-wagon has difficulty catching hold. This bark makes a fine covering for sandy roads and its wearing qualities are very good.

June 29, 1900. Ben and Charles Holt of the manufacturing company were in Spr.ngville this week to inspect the work being done by the steam wagon and they were well pleased with its behavior. The steam wagon is now carrying 38,000 feet of lumber a trip and makes three trips a week to Roth Spur. (Strathmore)

August 17, 1900, The New Dil-lonwood saw mills is a solid neat concern and the way it is put up indicates that the Young Brothers are in the sawing business there to remain awhile.

J. C. Lunegrover of Tulare a student of the University who spent his vacation of the Enterprise Mill, has returned to Berke-

October 13, 1900, Hunters tell us that two big grizzly bears still make their home on Mount Maggie across the middle Tule from Mountain Home.

November 23, 1900, J. W. Young was down from the Dil-lonwood mill, Wednesday. He reports two and one-quarter m les of flume built. He cut 400,000 ft. of lumber this season with 100,-000 feet of it to bring down yet. Work will be kept on at the mill during the winter.
